

Safety Arrives at the Next Level

2009 Product Development:

New Air Tractor Aircraft will feature the AmSafe inflatable seat belt and integrated air bag device.

Retrofit kits will be available for older models.

We are **soon to be certified** by AmSafe as an approved installer & repair station.

We saw the video of this amazing piece of equipment at the 2008 NAAA show. What a fantastic advancement this is to our industry.

Product Details:

The purpose of the airbag is as you expect: to reduce the potential for injury in the event of an accident.

In a severe impact, an airbag will deploy from the restraint, in a manner similar to an automotive airbag. The airbag will deploy between the head of the occupant and airplane interior structure. This will, therefore, provide some protection to the head of the occupant.

The restraint will rely on sensors to electronically activate the inflator for deployment.

Again, an amazing demonstration shown at the NAAA!

AmSafe is **the world leader** in safety and securement equipment for the aerospace, defense and ground transportation industries. <http://www.amsafe.com/>

Pricing details & availability information will be posted. Watch our website for details.
